C; Munction: catalyzes the proteolytic activation of coagulation factor IX
A; Pathway: blood coagulation intrinsic pathway
C; Superfamily: coagulation factor XI; trypsin homology
C; Keywords: blood coagulation; duplication; glycoprotein; hemophilia C; homodimer; hydro
F; 1-18/Domain: signal sequence #status predicted <SIG>
F; 1-18/Domain: signal sequence #status predicted <SIG>
F; 19-387/Product: coagulation factor XIa heavy chain #status experimental <HCH>

C; Comment: The proenzyme consists of two identical chains linked by one or more disulfid neactive site, and a heavy chain, which associates with high molecular weight (HMW) kin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          R;McMullen, B.A.; Fujikawa, K.; Davie, E.W. Sequence 2, Application US/10112221A

Publication No. US20030166851A1

GENERAL INFORMATION:

APPLICANT: Madison, Edwin

APPLICANT: Ong, Edgar O.

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING A TRANSMEMBRANE SERINE PROTEASE 9

TITLE OF INVENTION: ENCODED POLYPEPTIDES AND METHODS BASED THEREON

FILE REFERENCE: 24745-1615

CURRENT APPLICATION NUMBER: US/10/112,221A

CURRENT FILING DATE: 2002-03-27

PRIOR APPLICATION NUMBER: 60/279,228

PRIOR FILING DATE: 2001-03-27

PRIOR FILING DATE: 2001-03-27

PRIOR FILING DATE: 2001-05-15

NUMBER: OF SEQ ID NOS: 22

SOFTWARE: FASTSEQ for Windows Version 4.0

SEQ ID NO 2

LENGTH: 855

TYPE: PRT

Sequence 2, Application US/10147211A

Publication No. US20030235900A1

GENERAL INFORMATION: Edward

APPLICANT: Madison, Edward

APPLICANT: Yeh, Jiumn-Chern

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING A TRANSMEMBRANE SERITILE OF INVENTION: ENCODED POLYPEPTIDES AND METHODS BASED THEREON

FILE REFERENCE: 24745-1616

CURRENT APPLICATION NUMBER: US/10/147,211A

CURRENT APPLICATION NUMBER: US/291,001

PRIOR APPLICATION NUMBER: 60/291,001

PRIOR APPLICATION NUMBER: 60/291,001

PRIOR FILING DATE: 2001-05-14

NUMBER OF SEQ ID NOS: 23

SOFTWARE: FastSEQ for Windows Version 4.0
